## THE PRESENT MASTER UNIVERSE

Cross Section View (not to scale)

### THE RODS OF ABSOLUTUM

Little is known about the Rods of Absolutum, other than their existence. They will not be a part of the completed Master Universe, in the far distant future. Their widths vary, and have a depth of about four light years, and extend without interruption. The Rods are of two layers. The inner layer being Absolutum, and the outer layer, like a casing, being Ultimatum.

The width of the Master Universe from the Isle of Paradise out to OSZ 5 is about 2.3 trillion light years.

From the Isle of Paradise to the beginning of OSZ 4 about 1.4 trillion light years.

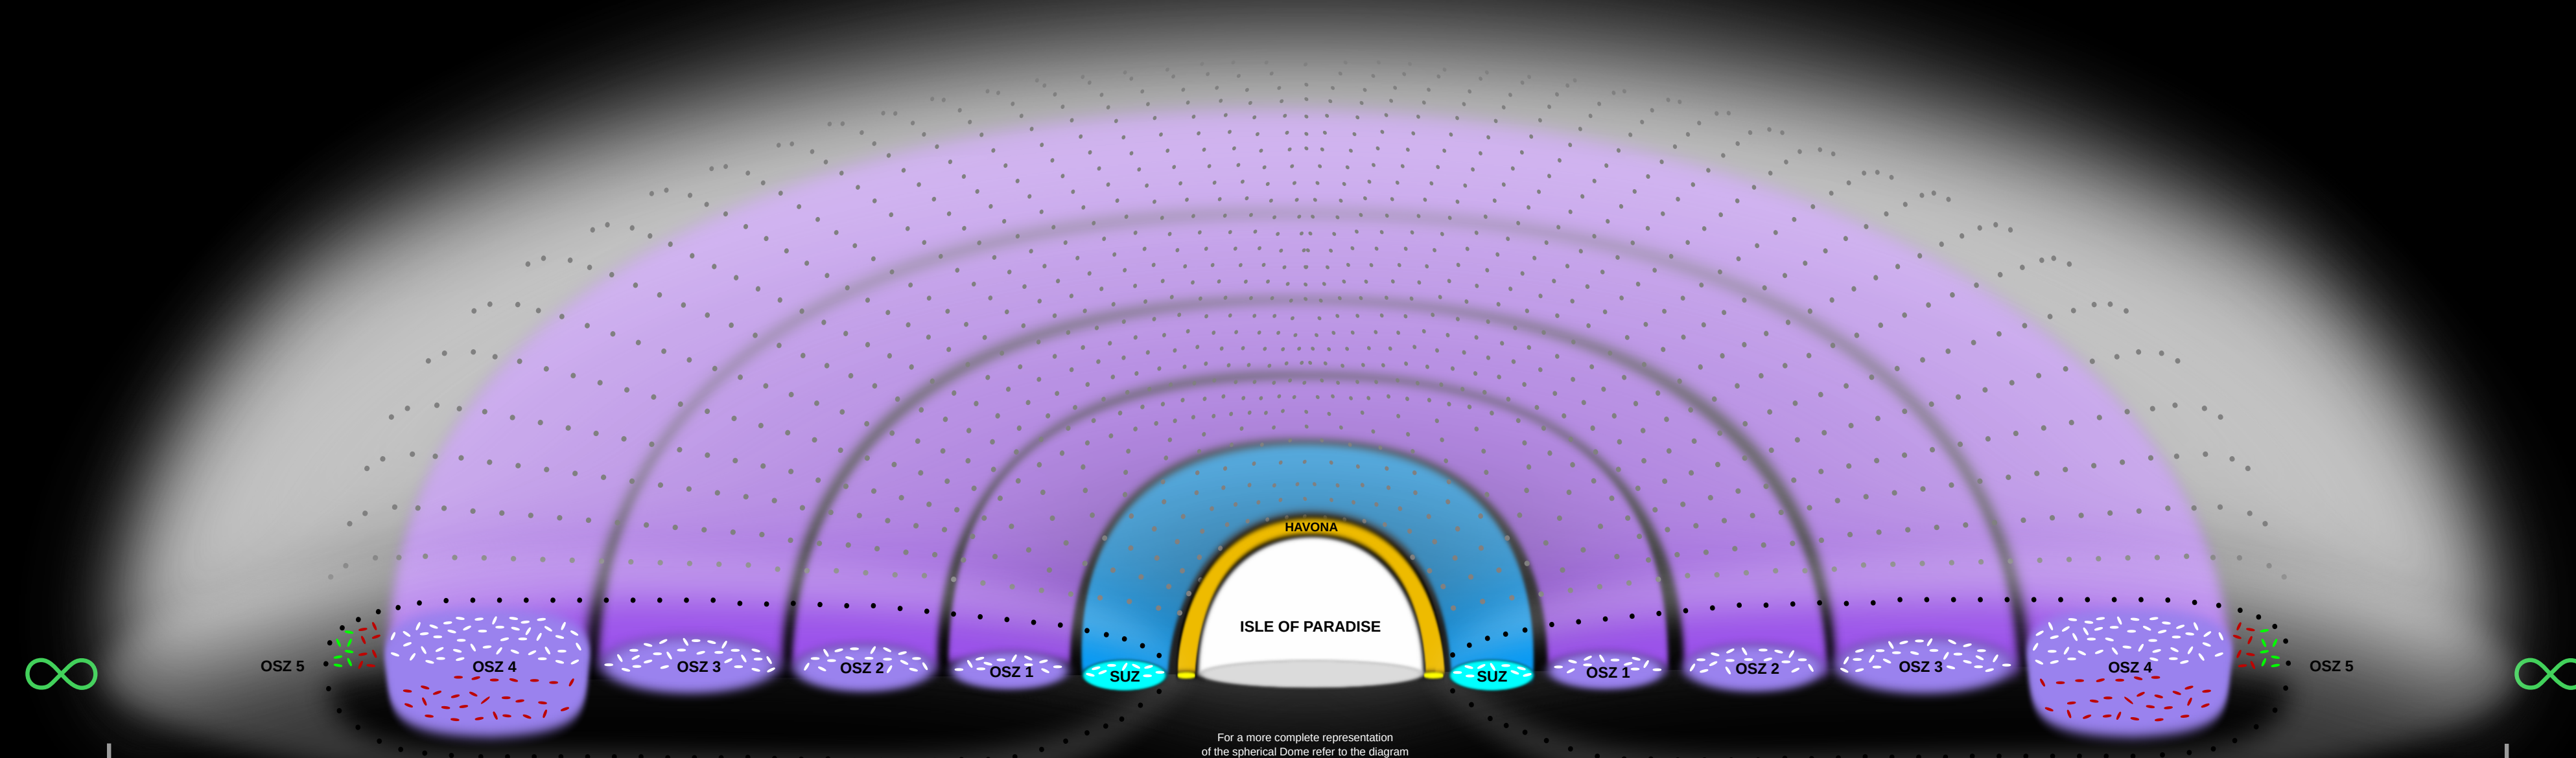

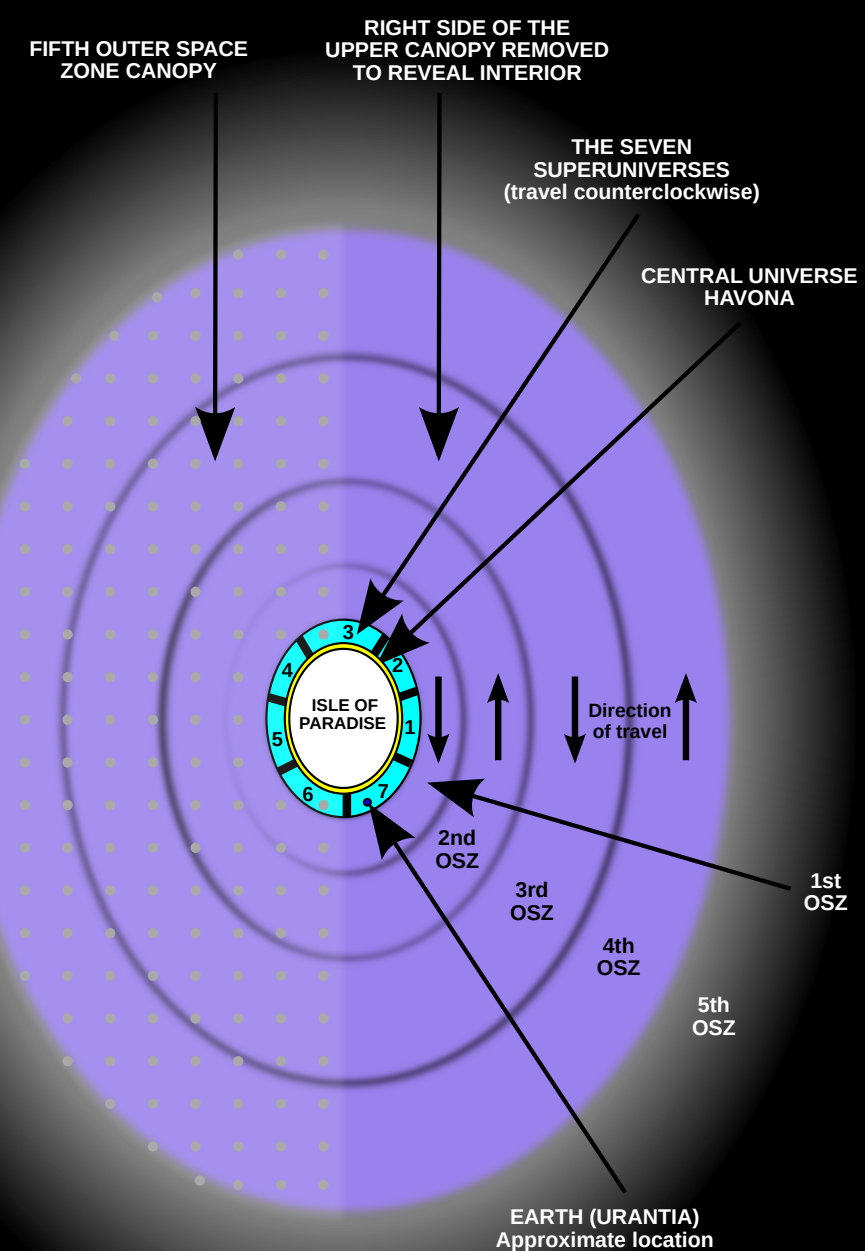

OSZ 1 about 25.4 billion light years across.

SUZ about 250 million light years across.

ISLE OF PARADISE over 4 billion light years across.

The Emergency Reserved Space Pockets (ERSP) hold huge amounts of ultimatons in reserve for just in case possibilities of spatial collapse as the transition from space to no space (OSZ 5) goes forward. The Ultimatons reserved there are for sub-particle building in space. The ERSP are full of thought as well. Thought exists as small packets or "bubbles" of granular activity made up of thought cells not resolved in time, but resolved in space, for future usages.

## THE COMPLETED MASTER UNIVERSE

The distance between the outer edges of the material Master Universe is about 5 trillion light years

The distance between the outer edges of the fifth outer space zone is about 9 trillion light years
