

What are Light and Life & Planetary Transformation?

What does Light and Life look like?

In a small nutshell it is the coming era of enlightenment, beginning by what the Bible calls the Millennium (the Bestowal Son planetary judgment) and culminating in what follows after it.

In a bigger nutshell it is the end result of the normal outworking of evolution on a mortal sphere that has not fallen to rebellion. Evolution begins with the seeding of life plasm by the Life Carriers, and ends when the planet is finally, completely and forever settled in Light and Life.

Light & Life is a transitional process on non rebellion planets, but Urantia's rebellion necessitates certain drastic measures to correct rebellion issues. These drastic measures, implemented under the mandates and dynamics of Ultimacy can be termed Transformative (beyond transitional), and are commonly referred to as *The Correcting Time*, but this is not the same as what we term the **Planetary Transformation**.

What is the focus and objectives of Light and Life?

Light & Life is a multi-stage process that focuses on these objectives:

1. Spiritual Unity
2. Social Harmony and Equity
3. Personal Growth and Purpose
4. Governance Based on Wisdom
5. Quality of Life
6. The Elimination of War and Conflict
7. Scientific and Technological Advancement in Service to Mankind
8. Celestial Cooperation

What is the work of Light and Life?

Light and Life status is reached in accordance with universe laws that require the proper evolutionary outworking of these specific areas of influence, which are considered the essential civilizational infrastructure systems, but each individual planet is allowed a certain amount of flexibility in how it fulfills these requirements:

- Race and Biology
- Government
- Culture
- Religion
- Language and Education
- Ethics
- Science and Technology
- Economy and Finance
- Thought Adjusters

What does the Planetary Transformation look like?

The Planetary Transformation which is something other than transformations of The Correcting Time, is an exception to normal universe and planetary functions. It is not standard procedure for any planet, and is something unique to Urantia that only came about because of Christ Michael's 7th bestowal here. No other planet in all of Nebadon has ever or will ever undergo the Planetary Transformation destined to occur on Urantia.

Because such a Planetary Transformation is unprecedented there (to the extent of my knowledge) is no available information to Urantians about its details other than what has been revealed to myself and our current Avonal Son in recent years.

The only overall description that can presently be given is that the Universal Father is building a special circuit of 100 evolutionary spheres that spans all seven superuniverses. Each of these 100 spheres were once rebellion planets in their respective Local Universe, and each one has been specifically reclaimed from rebellion by their Creator Son on His 7th bestowal, just as Christ Michael did with Urantia. Only 100 times has this ever happened in all the inhabited worlds of Creation. Urantia is the 100th and final planet which completes this special circuit.

Urantia's Planetary Transformation is a purely Ultimate non evolutionary path, applied on top of Urantia's role as an evolutionary planet of Supreme Light and Life destiny.

What is the focus and objectives of the Planetary Transformation?

The focus of Urantia's Planetary Transformation began with the terminal bestowal mission of Christ Michael to reclaim Urantia from rebellion.

The overall objective of Urantia's Planetary Transformation is to add a layer of permanent Ultimate/transcendental/absonite functionality to Urantia that goes beyond the Supreme status of Light and Life.

The specific objectives that are currently known for this permanent layer of Ultimate functionality is to convert Urantia into a hybrid evolutionary/architectural sphere so that it may serve as the gateway for all life going out to populate the many galaxies of the first outer space zone. This gateway functionality will be in conjunction with the 99 other special planets to form a Grand Universe training circuit, and will be headquartered on the continent of Antarctica in two special Supreme/Ultimate facilities. The first one referred to in the Bible as the New Jerusalem that comes down from Heaven measuring 1500 miles square, and to be manned by Master Architect #11 and his staff, and the second one being smaller and circular to be located inside the New Jerusalem and located directly over the south pole, and to be manned by a special envoy of Mother Spirit Nebadonia, and possibly by our returning Adam and Eve and their children, and functionally extending upward 1500 miles to connect with Nebadon's new 52 Supreme Adjutants and Supreme Spirit of Truth interface which was just very recently installed and stabilized just beyond Urantia's atmosphere.

What is the work of the Planetary Transformation?

There are still many unrevealed aspects to this work, but what is known so far is:

Installation of the 52 new Supreme Adjutant Mind Spirits originating from Havona (complete).

Installation of the new Supreme Spirit of Truth originating from Havona (complete).

Development of the Rebellion School curriculum (ongoing).

Development of the Direct Ascension School curriculum (ongoing).

Below is a map of the approximate size and location of the New Jerusalem coming down from Heaven, and overlaid on top of Antarctica. The square outline measuring 1500 miles square and will be the new outpost HQ of Master Architect #11 and his staff. The smaller circular outline representing Mother Spirit Nebadonia's transmitting outpost to the first outer space zone. It's exact size is not yet revealed but it will be big enough to encapsulate the movement of the south pole cause by Urantia's axial tilt. This smaller outpost will connect to the Paradise/Havona 52 Supreme Adjutants and Supreme Spirit of Truth circuits that are routed through Nebadon/Salvington, with Urantia's interface located 1,500 miles directly overhead.

Its location over the south pole will help anchor the connection with the overhead interface, as well as provide additional power for the transmitter.
